

Task: The Plan to Keep Building

1. How to Add the Next Case (My Standard Operating Procedure): To keep my portfolio updated without rebuilding it from scratch, I will follow this exact process for every new project:

- **Step 1:** Open my existing Claude/Gemini AI Context Project (which already knows my HTML/CSS stack, tone of voice, and design constraints).
- **Step 2:** Feed the AI the raw details of my new project and ask it to format the case study using the strict 3-beat shape:
 - *The Problem:* What was the exact technical or business challenge?
 - *What I Did:* What architecture, tools, or logic did I build to solve it?
 - *What Came of It:* What was the measurable result or core takeaway?
- **Step 3:** Copy the existing HTML project card structure in `index.html`, paste the AI-generated 3-beat text, update the image source, and push to GitHub to trigger the Vercel auto-deploy.
- **Step 4:** Update the AI Assistant's knowledge base (prompt) with a short summary of this new project so it can answer visitor questions about it.

2. The Next Piece of Work to Add: The next case study I will add to this portfolio is my "Refresh/Content Opportunity Scoring" machine learning model, which utilizes Hugging Face datasets.

3. Evidence of Reminder:
